Disclaimer: This document contains guidelines for Consolidated Edison Company of New York, Inc.’s (“Con Edison” or the “Company”) Bring Your Own Battery (“BYOB”) Program. The Con Edison Electric Tariff (“Electric Tariff”) prevails if any conflict exists between this document and the Electric Tariff.¹ Con Edison reserves the right to change any of the BYOB Program guidelines without notice. All capitalized terms are defined in *Section 2. Acronyms and Definitions*.

Purpose: This document is intended to provide additional clarification of Con Edison’s BYOB Program described in Rider L of the Company’s Electric Tariff.

To learn more about Con Edison’s programs, please visit the Company’s [DR website](#).

For more definitions, please see [Rider L section of the Electric Tariff](#), beginning on Leaf 211.

¹ See, Con Edison’s Schedule for Electricity Service, P.S.C. No. 10 – Electricity (the “Electric Tariff”).

2. Acronyms and Definitions

- **Baseline Load** – Average hourly load (kW) discharged by the ESS on days leading up to the Event to determine the level of Load Relief that is provided.
- **BYOB** – Bring Your Own Battery. The BYOB program is designed to utilize customer-owned ESS for demand response.
- **Capability Period** – May 1st through September 30th, during which Con Edison can dispatch Events.
- **DR** – Demand Response. The Demand Response Portfolio of utility programs incentivizes customers to change their energy consumption based on electric system needs.
- **DRV** – Demand Reduction Value. Compensation stream earned under the Value Stack.
- **ESS** – Energy Storage System.
- **Event** – Con Edison request for Participating Customers to provide load relief to the electric system by discharging their ESS.
- **Load Relief** – Reduction in Participating Customer load (kW) during an Event, measured against the Baseline Load.
- **LSRV** – Locational System Relief Value. Compensation stream earned under the Value Stack.
- **Participating Customers** – Eligible Con Edison electric customers who enroll and participate in the BYOB program.
- **Service Provider** – A third-party registered with the Company to manage Participating Customers' participation in the BYOB program. This may include manufacturers or third-party owners of ESS.
- **Value Stack** – Electric rate listed in the Con Edison Electric Tariff under Rider R compensating customer-owned grid exporting distributed energy resources (e.g., solar PV, energy storage).

3. Program Summary

The Bring Your Own Battery (“BYOB”) program enables eligible ESS to participate in Con Edison’s portfolio of DR programs by discharging energy during Events called to support Con Edison’s electric distribution system. Participating Customers are compensated by Con Edison for their performance, per sections 8 and 9 below.

4. Eligibility Requirements

Participating Customers must meet each of the requirements specified below:

- Have an active Con Edison electric account; Participating Customers that do not have an active Con Edison account number will be prohibited from participating in the BYOB Program. Account verification will take place at the time of enrollment.
- Have an eligible permanently installed, stationary, internet-connected ESS with a 50 kW or less power rating from one of the Service Providers listed below, interconnected according to the standards stated in the [New York State Standardized Interconnection Requirements and Application Process](#). Prior to enrolling participants must complete the Con Edison Distributed Generation Application Process on the company [website](#). If taking service under the Value Stack, Participating Customers must opt out of receiving DRV and LSRV compensation prior to participating in the BYOB Program. Opting out of DRV and LSRV is a one-time irrevocable decision that can be made at any point during a Participating Customer's Value Stack term.

Below is a list of approved Service Providers. This list is subject to change. An updated list will be maintained on the Company's BYOB program webpage and in this document.

- Tesla

5. Enrollment Deadlines

Participating Customers can enroll anytime between May 1st and September 30th. Per section 8 below, if a Participating Customer enrolls after Events have already been called, those events will still be included in the final performance calculation. Participating Customers are therefore advised to enroll before or as close to May 1st as possible.

6. Enrollment and Termination Process

Participating Customers will enroll in the BYOB program through their Service Provider, which must be included in the Company's list of approved Service Providers (see section 4).

Following initial enrollment, a Participating Customer's enrollment will roll over to the next Capability Period automatically.

If at any point a Participating Customer wishes to terminate their enrollment in the BYOB program, they can notify their Service Provider or reach out to Con Edison at demandresponse@coned.com.

Con Edison will validate that the Participating Customer has completed the interconnection process for the ESS at the time of enrollment.

7. Event Notification and Dispatch

When an event is scheduled by Con Edison, Event notifications will be sent directly to the ESS Service Provider. The Service Provider will dispatch the ESS on behalf of the Participating Customer to optimize participation in the BYOB Program. All technical details related to system dispatch can be found in the terms and conditions sections of individual ESS contracts between the Participating Customer and their Service Provider.

Events will be dispatched by Con Edison between the hours of 8AM and midnight for no more than four hours.

Events may be dispatched by Con Edison if the conditional triggers for either the Commercial System Relief Program (“CSRP”) or Distribution Load Relief Program (“DLRP”) are met in accordance with the [Electric Tariff](#). Con Edison may call test events to evaluate ESS performance at its discretion.

8. Performance and Baseline Calculations

Participating Customer performance will be evaluated using telemetry data from the ESS, which provides a direct measurement of power output. Con Edison will obtain telemetry data directly from the Participating Customer’s Service Provider.

A Participating Customer’s event performance will be calculated as the difference between the ESS’ average hourly discharged kW during each Event and the Participating Customer’s Baseline Load.

Seasonal performance will represent the average across all Events within the Capability Period. For example, if a Participating Customer’s event performance was 4 kW during Event #1, 3 kW during Event #2, and 2 kW during Event #3, their average performance for the Capability Period would be 3 kW (*i.e.*, the simple average of 4 kW, 3 kW, and 2 kW).

If a Participating Customer enrolls during the Capability Period after Events have already been dispatched, seasonal performance will still include all Events, where performance for any missed events will be 0 kW. For example, if three Events were dispatched before the Participating Customer was enrolled, the Participating Customer’s performance in those three events will be set at 0 kW and included the final seasonal performance calculation.

9. Incentive Rates

2026 Capability Period Incentive Rate (\$/kW of seasonal performance): **\$100**

Con Edison will offer Participating Customers in the BYOB program an annual performance-based incentive for each Capability Period. Per the example in section 8 above in which a Participating Customer's average performance for the Capability Period is 3 kW, their 3 kW of seasonal performance would be multiplied by the incentive rate above (expressed in \$ per kW) and distributed to the Participating Customer as an annual payment, as shown below:

Total Annual Incentive = Incentive Rate (\$100/kW) x Seasonal Performance (3 kW) = \$300

Con Edison will evaluate incentive rates prior to each Capability Period at the Company's discretion. If a change to the incentive rate is deemed appropriate by Con Edison, the incentive rate will be updated in both this document and on the BYOB program webpage.

10. Direct Vendor Payments

Participating Customers who purchase their ESS under a lease, financing, or Third-Party Ownership ("TPO") agreement may have the option to distribute their incentive directly to their Service Provider to offset a portion of their payback amount, depending on the terms of their contract agreement with their Service Provider. Service Providers can opt for this payment option during the enrollment process.

11. Settlement Payment

Participating Customer incentives will be settled and distributed as a one-time payment after the end of the Capability Period.
